SUMMARY

Customer-facing AI architect with 9 years in enterprise engineering and solutions consulting. Builds agent workflows with evals, guardrails, structured outputs and human review, and connects technical architecture to customer delivery. Influenced $1M+ in revenue annually and enabled 50+ engineers through workshops, cohorts and reusable playbooks.

EXPERIENCE

Slalom / Slalom Build - Seattle, WA | Oct 2020 - Present
Field CTO, Data & AI | 2025 - Present
Senior Solution Architect, Data Engineering | 2023 - 2025
Solution Architect, Data Engineering | 2022 - 2023
Senior Data Engineer / Data Engineer | 2020 - 2022

- Shipped Claude SDK- and LangChain-based agent APIs for internal tooling and enterprise delivery; established prompt, structured-output and failure-mode evals for an internal agent application.
- Co-developed the agentic SDLC pipeline and evaluation strategy: reusable agent workflows, automated quality gates, guardrails and human-review patterns. Co-built an in-house, Databricks-native RAG accelerator with a team.
- Influenced $1M+ in enterprise revenue annually through pre-sales, architecture discovery, executive workshops and solution strategy across AWS, GCP, Snowflake and Databricks.
- Built Claude- and Python-based migration accelerators using orchestration, structured prompting and validation loops; compressed selected delivery work from ~2 months to days-to-a-week and enabled 50+ engineers through cohorts, workshops and playbooks.
- Lead AI architect and engineer on a ~$10M legacy-to-Databricks modernization built on Slalom's agentic engineering platform; the program migrated and reconciled data objects at ~1,000 objects/day.
- Served for part of the program as Data & AI capability lead on the largest engagement in Slalom history, a 131-person federal program; led a 10-person engineering team and took part in the production on-call rotation supporting live cloud data platforms.
- Worked across Slalom's Snowflake, Databricks and dbt partnerships. On a Slalom partnership-funded project, built a Streamlit LLM/GenAI app on Snowflake Container Services during private preview, and did similar early-access work on Cortex.
- Built Teradata-to-Snowflake migration automation, Informatica Cloud API tooling and real-time AWS pipelines with Terraform, Kafka, Spark, dbt, Python and SQL; presented production observability lessons at dbt Coalesce 2022.

Alaska Airlines | Data Architect - Seattle Area | Jun 2017 - Mar 2020
Architected data science, warehousing, APIs and operational data products for Maintenance & Engineering, supporting aircraft-maintenance workflows tied to a $50M annual budget. Also did light JavaScript web development for data-entry tools.

TECHNICAL SKILLS

AI & LLM: Claude API/SDK, LangChain, agent orchestration, RAG, evals, guardrails, structured outputs, human-in-the-loop workflows
Data & Cloud: Databricks, Snowflake, dbt, Kafka, Spark, Informatica, AWS, GCP, Azure
Infrastructure & Languages: Terraform, Kubernetes, Docker | Python, SQL

EDUCATION & CERTIFICATIONS

University of Washington | B.A. Political Science, 2017 | Foster Professional Sales Program
Google Cloud Professional Data Engineer | Generative AI Engineering with Databricks | SnowPro Core | SnowConvert Developer
Publication: "Snowflake-native AgentOps: From story to delivery at scale," Medium
